DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3-5, 7-10, 11-20, 42-45 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Sato et al (Sato).

Sato discloses a heat developable photosensitive material containing a compound encompasses the scope of that of the present claimed invention. Note to the compound (Z) in column 2 and the exemplified compounds in columns 5-8 which contains an aromatic compound substituted with electron withdrawing group such as halogen group or CN group. The compound of the present claimed invention encompasses the scope of the compound of Sato when T₍₁₎ and R₁₂ forms an aromatic groups. Therefore, the invention as claimed lacks novelty, and alternatively, it would have been obvious to the worker of ordinary skill in the art at the time the invention was made to from a developer

within the scope taught by Sato with an expectation of achieving a material which has excellent preservability before use and provides color image having high image density and a low fog density.
